

Rodent Treatment Checklist

Rodents are attracted to homes by food they can eat which can be our trash or food in a cabinet. Removing this food is the first step. The second step is to barricade them out of your home. iPest can review with you where you can barricade rodents out and how.

The following list of items will help make the Pest Control Treatment for Rodents much more effective:

Indoors & Garage:

- Remove clutter inside and outside home (clutter provides harborage).
 - ✓ Remove items from below beds and behind and below dressers.
 - ✓ Keep trash out and away from home.
 - ✓ Empty & clean area under kitchen sinks.
 - ✓ Move all stored items two feet from walls. Several inches for the bottom of closets and cabinets.
- Vacuum home w/ strong vacuum and dispose of bag.
- Plug all holes with something rodents won't chew through like steel wool (rusts), wooden board, metal plate, or 1/4" (mouse) - 3/8" (rat) hardware cloth.
 - ✓ Rodents will chew through silicone and cloth
- Store all animal and human food in plastic containers.
- Thoroughly wash utensils that could have been exposed to Rodents.
- Enclose human grain type foods and animal food in plastic containers. Only put out as much feed as the animal will consume in one hour. A vet can be consulted on this.

After inside is trapped out, bait on outside!

For the Future:

- Do not Point leaf blower into Bait Stations. If you see small bits of colored bait near a bait station call iPest immediately.

- Keep trash out and away from home (food and harborage).
- Remove clutter inside and outside home (clutter provides harborage).
- Watch glue boards for Rodents.
- If you see Rodents in your home or have any questions **PLEASE** Call (361) 980-7378. iPest would also love to hear that you are not seeing Rodents as well. I'm never too busy to hear that.
